

THROUGH-PENETRATION FIRESTOP SYSTEMS

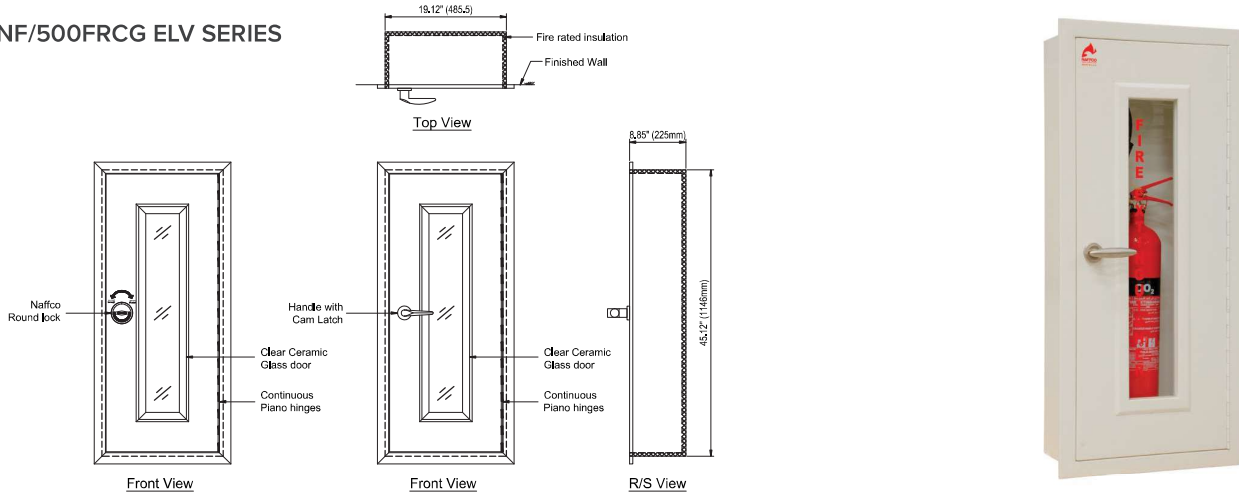

FIRE RATED CABINETS

PRODUCT DESCRIPTION

NAFFCO proudly manufactures fire-rated cabinets for use in fire-rated assemblies. Underwriters Laboratories, Inc. has classified and listed NAFFCO fire-rated cabinets for combustibile and non-combustibile wall systems. The cabinets are tested to ASTM E814 or UL1479 results in hourly rating of 2 hour for both flame ("F") and temperature transfer("T"). The fire-rated option eliminates the costly need to line the wall opening with fire-rated material. It also provides the specified assurance in maintaining the integrity of the wall penetration and in meeting building code specifications.
